

FUTURE designs were commissioned by Bisley to create a bespoke lighting scheme for their new showroom in Clerkenwell which is the home of the UK's Design community. The showroom is a stunning space which is multi-functional; it is used as an office, showroom and event space and is an important step in the evolution of Bisley, showcasing the brand as a complete furniture solution provider for the contemporary workplace.

This meant that FUTURE designs had to provide a lighting scheme that would not only showcase Bisley's portfolio but also provide the very best in workplace lighting design, promoting wellness and comfort for the employees and the visitors. To promote wellness all the luminaires supplied were tunable white LEDs offering colour change from 2,700 kelvin (warm white) up to 6,000 kelvin (cool white) thus allowing Bisley to vary the colour temperature to suit their needs throughout the working day. This also enabled the staff to change the lighting during presentations and social events.

In the main area of the showroom, striking light scenes were created using FUTURE designs VANE luminaire, with slices of light darting across the ceiling. The versatility of VANE enhanced the space adding a visually engaging appearance, with the feature lighting arranged as a rectangle, L shape and cross section. High grade extruded aluminium housing gives added flexibility to VANE as it allowed for tailor made lengths and seamless joints manufactured specifically for the space.

The luminaires are controlled by a Tridonic lighting control system via a downloadable app. Within this app the colour temperature and times can be set. This function also offers another advantage with clients being able to view the furniture

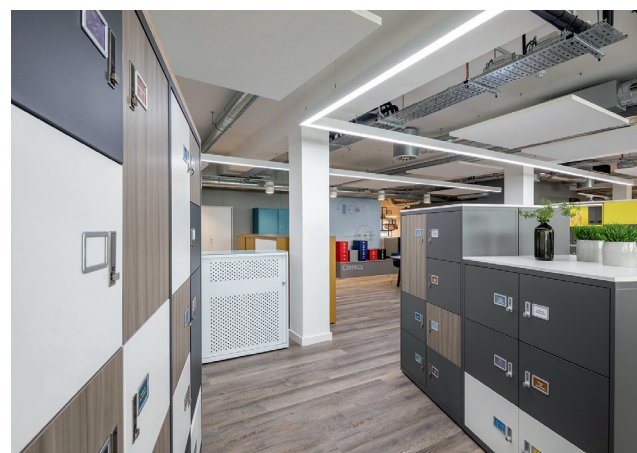

Bespoke lighting from FUTURE designs creates a dynamic lighting scheme for one of Clerkenwell's newest showrooms.

finishes under different lighting replicating the conditions of their own space.

Large POD pendants were fitted in the breakout zones which created an eye-catching element and helped to define the area. This statement centrepiece luminaire is designed with an aluminium shell and incorporates an LED system, which gives a homogeneous flood of light to the front face.

COPPA bespoke lighting systems from FUTURE designs were an integral design element used in the boardroom creating a luxurious and dynamic space. Copper was traditionally used for lighting fabrications in bygone years due to its durability, corrosion resistance, prestigious appearance and ability to form complex shapes. The renaissance of copper in interiors design led to FUTURE designs creating COPPA a unique system which embraces the beauty of the past whilst incorporating the latest in LED technology.
